# NEW FEATURE: Export chart images

- Until this release, it has only been possible to export data from charts in either excel or comma separated format. Images of the charts themselves have not been available for export.
- We have now added the ability to export images of the charts to make it easier for you to insert them into reports, emails and presentations. This feature is available for all graphical components (or, in the case of summary component, each individual chart)
- You can select this export option by clicking on the new “Export” button in the top right corner of the component (1). As well as .xls and .csv formats you are presented with .png and .jpg formats
- You have the option of how many pixels you wish to export so you can choose the balance between resolution and memory
